

Winstrom

“Bolted” Doors

Winstrom "Bolted" Doors

Winstrom Bolted Core (WBK)

Features

- ① **TIE RODS** The "bolted" part of the Bolted door, these horizontal tubes with 7/8" bolts and stainless steel washers hold your door together and keep it square.
- ② **KICKPANEL** These doors are built with a 3/4" solid core kickpanel. It is tough because it is made with a high density, moisture resistant particle board center and protected by twin sheet metal laminates. The aluminum laminate has a lifetime baked enamel finish with a protective polyurethane overcoat. (NOTE: BLACK doors are built with .040" sheet metal kickplate instead of the core kickpanel.)
- ③ **HINGES** Three painted stainless steel hinges with bronze "oilite" bushings ensure smooth, quiet, and sag-free operation of your door.
- ④ **MORTISE AND TENON** This overlapped butt-type corner is the most reliable joint and is used in most commercial-grade entry doors. The precision machined tongue and groove ensures continued stability and squareness.
- ⑤ **Z-BAR FRAME** This heavy framing bar is strong enough to carry the weight of such a sturdy door. The unique drip-cap header directs water away from the door opening to keep you and your guests dry as you enter.
- ⑥ **EXPANDER** The unique dual pitch, double sweep bottom expander conforms to sloped or flat thresholds to give a reliable seal against the weather. Now also available in a bright gold finish!
- ⑦ **INTERCHANGEABLE GLASS AND SCREEN INSERTS** Rigid tubular frames have the strength to remain square for a lifetime of easy seasonal chaneovers. Winstrom's unique InvisiLock system holds the inserts securely in the door without any clips or retainer strips. (NOTE: The lower inserts of two-lite style doors are secured with traditional clips and thumbscrews.)
- ⑧ **SELF-STORING WINDOW FRAMES** The self-storing window has a removable full screen in the outside track that enables top and/or bottom ventilation. Its sliding sash design permits quick changes between ventilating and closed positions.
- ⑨ **CLEAR SAFETY GLASS** Tempered glass is used in all doors—even the special sizes. (NOTE: The narrow sidelites of Mediterranean style doors are acrylic.)
- ⑩ **COLORS** Depending on the style you select, there are as many as 6 colors to choose from: White (W), Brown (B), Medium Bronze (MB), Tan (T), Beige (BE), and Black (BL). (Available colors are listed by code below each door style.)

Ask your dealer for details about the Winstrom warranty.
